

Cleaning Technologies Group, LLC introduces new cleaning solutions at PMTS / PCx 2023

Cleaning Technologies Group a world leader in providing cleaning and waste minimization technologies will introduce a host of advanced cleaning solutions at the PMTS / PCx 2023 in Cleveland Ohio April 18 - 20, 2023. Visitors to Cleaning Technologies Group Booth #7092 will be introduced to a number of new products, technologies and services. Among the new technologies exhibited at the show will be:

Ransohoff LeanVeyor parts washing system is engineered for lean manufacturing, while reducing floor space requirements and providing exceptional cleaning and drying performance. We use a common-sense approach to component choice and placement for quick and efficient service and access. All stages are insulated and compartmentalized with individually adjustable exhaust dampers, reducing system heat loss.

The entire unit has been engineered and manufactured from the ground up to be flexible, durable, simple to operate, and easy to maintain. The LeanVeyor can process on a flatwire belt or custom fixture. Optional ultrasonic stages can be added along with loading and unloading automation.

Mini Parts Washer: the Mini Parts Washer represents a cleaning breakthrough for manufacturers of small parts. This compact conveyerized system is for continuous, one-at-a-time, parts cleaning at the point of manufacture. This Mini Parts Washer was designed by Stoelting and manufactured by Ransohoff.

AgiSonic® Ultrasonic Parts Washer Cleaning constructed of all stainless steel, is a robust ultrasonic cleaning machine designed for heavy duty parts washing with vertical parts agitation. Available in three standard sizes, each system incorporates an air powered agitation platform that facilitates loading, unloading, and agitates parts with a 6" stroke up to 15 times per minute. The AgiSonic parts automatic filling and liquid makeup (from a customer supplied source), pump and single bag filter, and an overflow weir skimmer and automatic oil removal system, and a lift-off lid. Ultrasonic time, cleaning tank temperature warm up, filtration and oil removal are all digitally controlled using a touch screen interface. Completely self-contained and requiring a three-phase power supply hookup, the largest machine can accommodate a platform load up to 500lbs.

The AgiSonic parts washers are ideal for automotive, aerospace, medical and general industrial applications. These systems can operate in the harshest industrial environment or in precision cleaning applications.

We will have technical experts available at the show to explain our technologies more in-depth and to provide suggestions to our customers for improving their cleaning processes.
